Lab 03

HMS

HMS (Hospitals Management System):

➢ Continue with our previously created module "hms"

➢ Add email field to patients' model and make sure that it is a valid and unique email address

➢ Link patient model with customers model from CRM module by adding a new field in customers model called "related_patient_id" and show this field inside Misc group within sales and purchase tab

HMS

HMS (Hospitals Management System):

➢ Convert the patient's age field to be auto calculated based on birth date

➢ Add a constraint on CRM customer model which prevents linking customer with email which already exists in patient model.

➢ Prevent users to delete any customer linked to a patient

➢ Show website field in the list view for customers

➢ Make the Tax ID field mandatory for CRM Customers
